

Hanseatic Energy Hub invites

## Citizens' information event: Dialogue market on the Stade LNG terminal

Dear citizens,

the Hanseatic Energy Hub (HEH) in Stade is a future-flexible infrastructure: the new terminal for liquefied gases diversifies the long-term import requirements of German industry for affordable energy and contributes to a secure and sustainable supply.

### Securing the future of energy

In the first stage of expansion, an emission-free terminal for LNG is to be commissioned at the Stade Industrial Park by 2026, with infrastructure also approved for Bio-LNG and Syntethic Natural Gas (SNG). The hub also offers storage facilities and thus additional flexibility to be able to react to movements in the market. With the growing supply of new climate-neutral energy sources worldwide, the hub will also be ready for the import of hydrogen-based energy sources in a second expansion stage.

Before the approval documents are disclosed, which can be viewed by all interested parties, we would like to inform you about the project and sincerely invite you to an information event. Our HEH experts will be available to talk to you there and will be happy to explain the background, the project process, and the timetables.

We look forward to your visit!

With kind regards

**Hanseatic Energy Hub GmbH**

**Citizens' information event:  
Dialogue market on the Stade LNG terminal**

Tuesday, 31 May 2022, Wednesday, 1  
June 2022 both days from 5 to 8 pm

Stade Town Hall \*  
Hökerstraße 2  
21682 Stade
